

```
int main ()
```

```
{
```

```
    int arr[] = {10, 20, 30}
```

```
    cout << size of (arr);
```

```
    solve()
```

```
}
```

```
    solve (int arr, int size)
```

```
    {
```

```
        cout << size of (arr);
```

```
    }
```

Size = 8 = ?

↓

Size = 12

Pointer to Pointer

```
int a = 0;
```

```
int * ptr = &a;
```

```
int ** ptr2 = &ptr;
```

```
** ptr2 → 5  
* ptr   → 5
```
